The Phillips-Edelman family is coping with the news that their youngest child, Angelina (3 ½) has stage 4 Neuroblastoma.

Only 500 children a year are diagnosed with this type of cancer. The doctor is hopeful that Angelina can be treated and will beat this. She was given a 50/50 chance. We were also told that the 5-year survival rate for children with Neuroblastoma is 35%.

She just began treatment a few weeks ago, and we need your help to raise money to offset the cost of her treatment and ongoing care, which began on May 15th, 2013.
