# Verona Public School District Curriculum Overview

# 5th Grade Science

Curriculum Committee Members: Nadia Domenick

Supervisor: Glen Stevenson

Curriculum Developed: Winter 2012 July 2016 July 2017

**Board Approval Date:** March 27, 2012 August 30, 2016 August 29, 2017

Verona Public Schools 121 Fairview Ave., Verona, NJ 07044 www.veronaschools.org

#### Verona Public Schools Mission Statement:

The mission of the Verona Public Schools, the center of an engaged and supportive community, is to empower students to achieve their potential as active learners and productive citizens through rigorous curricula and meaningful, enriching experiences.

#### Course Description:

Fifth grade science curriculum addresses the science standards and presents "opportunities for student to engage directly with natural phenomena, tools of science, real-world problems and technical and design challenges. The course provides an instructional framework to help all students develop age-appropriate scientific habits of mind while building on students' prior knowledge and experiences and allowing them to apply knowledge and problem solving strategies in new contexts," (STC, 2012).

The 5th grade curriculum makes use of three Science and Technology Centers kits, Exploring the Properties of Matter, Ecosystems, and Electric Circuits. In the unit Exploring the Properties of Matter, students investigate basic properties of matter and the use of these properties to distinguish 1 substance from another. Students begin by examining physical properties and then turn to the characteristic properties of density; boiling, melting, and freezing points; rates of thermal expansion; and solubility. They determine that these properties are independent of amount and, taken together, can be used to identify an unknown substance. In Ecosystems, students set up terrariums for crickets and isopods. Duckweed, algae, Elodea, guppies, and snails are introduced to an aquarium. Connecting the 2 habitats to create an "ecocolumn," students observe the relationship between the 2 environments and the organisms living within them. Students simulate the effects of pollutants -road salt, fertilizer, and acid rain - on the environment. In Electric Circuits students focus on the properties of electricity. They investigate how various materials are affected by electricity, & they identify conductors and insulators and they go on to explore series and parallel circuits, switches, and diodes.

Prerequisite(s):

4th grade

Standard 8: Technology Standards		
8.1: Educational Technology: All students will use digital tools to access, manage,	8.2: Technology Education, Engineering, Design, and Computational Thinking -	
evaluate, and synthesize information in order to solve problems individually and	<b>Programming:</b> All students will develop an understanding of the nature and impact of technology,	
collaborate and to create and communicate knowledge.	engineering, technological design, computational thinking and the designed world as they relate to the	
	individual, global society, and the environment.	
A. Technology Operations and Concepts	A. The Nature of Technology: Creativity and Innovation	
B. Creativity and Innovation	B. Technology and Society	
C. Communication and Collaboration	C. Design	
D. Digital Citizenship	D. Abilities for a Technological World	
E. Research and Information Fluency	E. Computational Thinking: Programming	
X F. Critical thinking, problem solving, and decision making		

SEL Competencies and Career Ready Practices			
<b>Social and Emotional Learning Core Competencies:</b> These competencies are identified as five interrelated sets of cognitive, affective, and behavioral capabilities	<b>Career Ready Practices:</b> These practices outline the skills that all individuals need to have to truly be adaptable, reflective, and proactive in life and careers. These are researched practices that are essential to career readiness.		
Self-awareness: The ability to accurately recognize one's emotions and thoughts and their influence on behavior. This includes accurately assessing one's strengths and limitations and possessing a well-grounded sense of confidence and optimism.	<ul> <li>X CRP2. Apply appropriate academic and technical skills.</li> <li>CRP9. Model integrity, ethical leadership, and effective management.</li> <li>CRP10. Plan education and career paths aligned to personal goals.</li> </ul>		
<b>Self-management:</b> The ability to regulate one's emotions, thoughts, and behaviors effectively in different situations. This includes managing stress, controlling impulses, motivating oneself, and setting and working toward achieving personal and academic goals.	<ul> <li>CRP3. Attend to personal health and financial well-being.</li> <li>CRP6. Demonstrate creativity and innovation.</li> <li>X CRP8. Utilize critical thinking to make sense of problems and persevere in solving them.</li> <li>CRP11. Use technology to enhance productivity.</li> </ul>		
<b>Social awareness:</b> The ability to take the perspective of and empathize with others from diverse backgrounds and cultures, to understand social and ethical norms for behavior, and to recognize family, school, and community resources and supports.	<ul> <li>X CRP1. Act as a responsible and contributing citizen and employee.</li> <li>CRP9. Model integrity, ethical leadership, and effective management.</li> </ul>		
<b>Relationship skills:</b> The ability to establish and maintain healthy and rewarding relationships with diverse individuals and groups. This includes communicating clearly, listening actively, cooperating, resisting inappropriate social pressure, negotiating conflict constructively, and seeking and offering help when needed.	<ul> <li>X CRP4. Communicate clearly and effectively and with reason.</li> <li>CRP9. Model integrity, ethical leadership, and effective management.</li> <li>CRP12. Work productively in teams while using cultural global competence.</li> </ul>		
<b>Responsible decision making:</b> The ability to make constructive and respectful choices about personal behavior and social interactions based on consideration of ethical standards, safety concerns, social norms, the realistic evaluation of consequences of various actions, and the well-being of self and others.	<ul> <li>CRP5. Consider the environmental, social, and economic impact of decisions.</li> <li>CRP7. Employ valid and reliable research strategies.</li> <li>X CRP8. Utilize critical thinking to make sense of problems and persevere in solving them.</li> <li>CRP9. Model integrity, ethical leadership, and effective management.</li> </ul>		

Standard 9: 21 <sup>st</sup> Century Life and Careers			
<b>9.1: Personal Financial Literacy:</b> This standard outlines the important fiscal knowledge, habits, and skills that must be mastered in order for students to make informed decisions about personal finance. Financial literacy is an integral component of a student's college and career readiness, enabling students to achieve fulfilling, financially-secure, and successful careers.	<b>9.2: Career Awareness, Exploration &amp; Preparation:</b> This standard outlines the importance of being knowledgeable about one's interests and talents, and being well informed about postsecondary and career options, career planning, and career requirements.	<b>9.3: Career and Technical Education:</b> This standard outlines what students should know and be able to do upon completion of a CTE Program of Study.

Pt for: of scientific phenomena and properties of matter. e calculations of volume, mass, density, solubility, boiling point, . o gather and record data.

- Water displacement can be used to measure the volume of irregular objects and volume of air in a container.
- Density is independent of amount or shape.
- Buoyancy (negative, positive or neutral) is the ability of an object to float in a liquid .
- Shape affects the mass of water displaced by a solid in a liquid and therefore affects its ability to float.
- Density of a substance, in any phase, will determine where it rests in a column of liquid or gas if they are immiscible (do not mix).
- Applying heat to a substance affects its properties it may cause a phase change, a physical or chemical change in a substance.
- Chemical changes form new products.
- In general, matter expands when heated and contracts when cooled. Temperature is based on thermal expansion.
- State of matter depends on its boiling and freezing points and the external temperatures. The kinetic theory of matter accounts for the observed phase changes in matter.
- Mass remains constant during phase changes, and requires the gain or loss of heat energy.
- The properties of an object determine its uses.
- Solutions are mixtures of a solute and a solvent
- Some solids dissolve in some liquids.
- Mass remains constant when a solute dissolves in a solvent.
- Differences in solubility have practical applications.
- The choice of a material for a product is partly determined by the characteristic properties of the material.
- Manufactured objects are usually made from a variety of material and undergo processing before suitable for manufacturing.

- presentations.
- Recognize patterns in single lab-group data and in class results.
- Use results of previous experiments and observations to predictions for new situations.

Communicate experimental and research results in writings, graphs, tables, and oral

• Research and manage ideas and information.

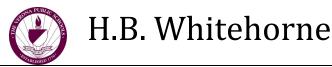

• Design and conduct controlled experiments.

- Reflect upon experiences with Exploring Properties of Matter in writing and oral discussion.
- Write complete, coherent accounts of inquiries conducted in class with evidence-based conclusions.
- Continue to seek more information on the properties of matter in reading and online research.
- Develop the ability to assess validity of information on properties of matter and other scientific matters.
- Evaluate own learning while studying Exploring Properties of Matter.

# Stage 2: Acceptable Evidence

### **Transfer Task**

Students will accurately apply the concepts of mass and volume to calculate density to identify the material from which an object is made. Students will utilize measurement skills, knowledge of density and create a data table to determine the substance that makes up an unknown object. Students will be able to independently utilize their knowledge and skills to interpret tables, diagrams, graphs and experiments. Refer to Lesson 14 in the STC manual of Exploring the Properties of Matter for the procedures and materials needed.

Unit Title / Topic: Ecosystems

# Unit Duration: 60 days

# **Stage 1: Desired Results**

### Established Osal

Established Goals:		
5-PS3-1. Use models to describe that energy in animal	s' food (used for body repair, growth, motion, and to ma	intain body warmth) was once energy from the sun.
[Clarification Statement: Examples of models co		
	rials they need for growth chiefly from air and water. [Cla	arification Statement: Emphasis is on the idea that plant
matter comes mostly from air and water, not fror	· · · · ·	
	f matter among plants, animals, decomposers, and the e	nvironment [Clarification Statement: Emphasis is on the
	mposed materials in soil) is changed by plants into matter th	
	lary: Assessment does not include molecular explanations.]	
	individual communities use science ideas to protect th	a Earth's resources and environment
5-E335-1. Obtain and combine mormation about ways	s individual communities use science ideas to protect th	e Earth's resources and environment.
Science and Engineering Practices Developing and Using Models Use models to describe phenomena. (5-PS3-1),(5-LS2-1) Engaging in Argument from Evidence Support an argument with evidence, data, or a model. (5-LS1-1) Obtaining, Evaluating, and Communicating Information Obtain and combine information from books and/or other reliable media to explain phenomena or solutions to a design problem. (5-ESS3-1) Connections to Nature of Science Science Models, Laws, Mechanisms, and Theories Explain Natural Phenomena Science explanations describe the mechanisms for natural events. (5-LS2-1)	<ul> <li>Disciplinary Core Ideas</li> <li>PS3.D: Energy in Chemical Processes and Everyday Life</li> <li>The energy released (from) food was once energy from the sun that was captured by plants in the chemical process that forms plant matter (from air and water). (5-PS3-1)</li> <li>US1.C: Organization for Matter and Energy Flow in Organisms</li> <li>Food provides animals with the materials they need for body repair and growth and the energy they need to maintain body warmth and for motion. (secondary to 5-PS3-1)</li> <li>US1.C: Organization for Matter and Energy Flow in Organisms</li> <li>Paths acquire their material for growth chiefly from air and water. (5-LS1-1)</li> <li>US2.A: Interdependent Relationships in Ecosystems</li> <li>The food of almost any kind of animal can be traced back to plants. Organisms are related in food webs in which some animals eat plants for food and other animals eat the animals that eat plants. Some organisms, such as fungi and bacteria, break down dead organisms (both plants or plants parts and animals) and therefore operate as "decomposers." Decomposition eventually restores (recycles) some materials back to the soil. Organisms can survive only in environments in which their particular needs are met. A healthy ecosystem is one in which multiple species of different types are each able to meet their needs in a relatively stable web of life. Newly introduced species can damage the balance of an ecosystem. (5-LS2-1)</li> <li>US2.B: Cycles of Matter and Energy Transfer in Ecosystem</li> <li>Matter cycles between the air and soil and among plants, animals, and microbes as these organisms live and die. Organisms obtain gases, and water, from the environment, and release waste matter (gas, liquid, or solid) back into the environment. (5-LS2-1)</li> <li>US2.B: Cycles of Matter and Energy Transfer in Ecosystem</li> <li>Human activities in agriculture, industry, and everyday life have had major effects on the land, vegetation, streams, oc</li></ul>	Crosscutting Concepts         Energy and Matter         • Energy can be transferred in various ways and between objects. (5-PS3-1)         • Matter is transported into, out of, and within systems. (5-LS1-1)         Systems and System Models         • A system can be described in terms of its components and their interactions. (5-LS2-1).(5-ESS3-1)         Connections to Nature of Science         Science Addresses Questions About the Natural and Material World.         • Science findings are limited to questions that can be answered with empirical evidence. (5-ESS3-1)
Common Core State Standards Connections: ELA/Literacy – RI.5.1 Quote accurately from a text when explaining what the text says explicitly and when or RI.5.7 Draw on information from multiple print or digital sources, demonstrating the ability to RI.5.9 Integrate information from several texts on the same topic in order to write or speak a SL.5.5 Include multimedia components (e.g., graphics, sound) and visual displays in preser W.5.1 Write opinion pieces on topics or texts, supporting a point of view with reasons and in Mathematics – MP.2 Reason abstractly and quantitatively. (5-LS1-1) MP.4 Model with mathematics. (5-LS1-1) MP.5 Use appropriate tools strategically. (5-LS1-1) 5.MD.A.1 Convert among different-sized standard measurement units within a given measure	locate an answer to a question quickly or to solve a problem efficiently. (5-PS3-1) bout the subject knowledgeably. (5-LS1-1) tations when appropriate to enhance the development of main ideas or themes. (5-PS3-1)	real world problems. (5-LS1-1)
Transfer Goal:		
Students will be able to independently use their learning to	present a design solution for reducing pollution in the Chesa	apeake Bay.

### Students will understand that:

- Interactions within and among living systems cause changes in matter and energy.
- Organisms are linked to each other and to their environments in a web of relationships.
- An ecosystem is a community of organisms that interact with each other and the environment. Humans may affect ecosystems in many ways. Model ecosystems may be used to learn more about the relationships that exist on earth.
- Organisms in ecosystems have dependent and independent relationships.
- Nature and human activity may affect an ecosystem in beneficial or harmful ways.
- People can develop solutions to mitigate the effects of pollutants.
- Environmental problems are complex and must be considered from many viewpoints; most solutions involve trade-offs between those differing views.

#### Students will know:

- A terrarum is a model of a terrestrial environment that can be used to make observations applicable to all terrestrial environments.
- An aquarium is a model of an aquatic environment that can be used to make observations applicable to all aquatic environments.
- An environment in which producers and consumers form interdependent relationships is an ecosvstem.
- In an ecosystem, organisms function as producers and consumers.
- Natural and human-made events can disturb a stable ecosystem.
- Scientific experiments with variables and a control can be designed to test the impact of pollution upon an ecosystem.
- The data from repeated experiments provide the evidence needed to support or negate a hypothesis.

### Students will be able to:

**Essential Questions:** 

• What is a fair test?

• What is an environmental trade-off?

How do humans affect ecosystems?

- Construct model terrariums and aquariums.
- Observe and record data of the relationships in their model habitats.

• How can studying models inform our understanding of ecosystems?

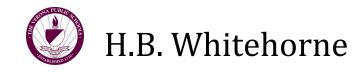

- Make predictions of cause and effect when the terrarium and aquarium are linked.
- Design and conduct a controlled experiment to study the effects of pollution.
- Analyze and interpret data to make sense of the results of their experimental treatment.
- Use evidence to construct a design solution for pollution reduction.

- A pollutant is anything that can harm an ecosystem.
- Pollution is a condition that results when pollutants interact with the environment.
- aquatic, environment, habitat, observe, terrestrial, aquarium, germination, model, terrarium, frond, model, organism, photosynthesis, producer, respiration, fry, gastropods, gravid spot, larvae, lateral line, live-bearer, mantle, radula, scavengers, abdomen, cerci, consumer, entomologist, exoskeleton, isopod, house cricket, molt, nymph, ovipositor, scavengers, thorax, acid rain, acid, base, neutral, fossil fuels, pH, fertilizers, algae bloom, pollutant, acidity, trade-off, analyze, experimental variable, control, controlled, experiment, data, disrupt, ecosystem, evidence, water pollution, watershed, algae bloom, sediment

## **Stage 2: Acceptable Evidence**

### **Transfer Task**

Unit Post Assessment

# Science Grade 5

#### Unit Title / Topic: Electric Circuits

Unit Duration: 60 days

Stage 1: Desired Results

#### **Established Goals:**

4-PS3-2. Make observations to provide evidence that energy can be transferred from place to place by sound, light, heat, and electric currents. [Assessment Boundary: Assessment does not include quantitative measurements of energy.]

4-PS3-3. Ask questions and predict outcomes about the changes in energy that occur when objects collide. [Clarification Statement: Emphasis is on the change in the energy due to the change in speed, not on the forces, as objects interact.] [Assessment Boundary: Assessment does not include quantitative measurements of energy.]

4-PS3-4. Apply scientific ideas to design, test, and refine a device that converts energy from one form to another.\* [Clarification Statement: Examples of devices could include electric circuits that convert electrical energy into motion energy of a vehicle, light, or sound; and, a passive solar heater that converts light into heat. Examples of constraints could include the materials, cost, or time to design the device.] [Assessment Boundary: Devices should be limited to those that convert motion energy to electric energy or use stored energy to cause motion or produce light or sound.]

#### **Crosscutting Concepts** Science and Engineering Practices **Disciplinary Core Ideas** Asking Questions and Defining Problems **Energy and Matter** PS3.A: Definitions of Energy • Energy can be moved from place to place by moving objects or through sound, light, • Ask questions that can be investigated and predict reasonable outcomes based on • Energy can be transferred in various ways and between objects. (4-PS3-2). ctric currents. (4-PS3-2),(4-PS patterns such as cause and effect relationships. (4-PS3-3) (4-PS3-3), (4-PS3-4) Planning and Carrying Out Investigations PS3.B: Conservation of Energy and Energy Transfer • Energy is present whenever there are moving objects, sound, light, or heat. When • Make observations to produce data to serve as the basis for evidence for an Connections to Engineering, Technology, explanation of a phenomenon or test a design solution. (4-PS3-2) objects collide, energy can be transferred from one object to another, thereby and Applications of Science Constructing Explanations and Designing Solutions changing their motion. In such collisions, some energy is typically also transferred to Influence of Science, Engineering and Technology on Society and the Natural Use evidence (e.g., measurements, observations, patterns) to construct an explanation. (4-PS3-1) the surrounding air; as a result, the air gets heated and sound is produced. World (4-PS3-2),(4-PS3-3) Engineers improve existing technologies or develop new ones. (4-PS3-4) • Light also transfers energy from place to place. (4-PS3-2) • Apply scientific ideas to solve design problems. (4-PS3-4) Energy can also be transferred from place to place by electric currents, which can then be used locally to produce motion, sound, heat, or light. The currents may have **Connections to Nature of Science** been produced to begin with by transforming the energy of motion into electrical Science is a Human Endeavor energy. (4-PS3-2).(4-PS3-4) Most scientists and engineers work in teams. (4-PS3-4) PS3.C: Relationship Between Energy and Forces • Science affects everyday life. (4-PS3-4) When objects collide, the contact forces transfer energy so as to change the objects' motions (4-PS3-3) PS3.D: Energy in Chemical Processes and Everyday Life • The expression "produce energy" typically refers to the conversion of stored energy into a desired form for practical use. (4-PS3-4) ETS1.A: Defining Engineering Problems Possible solutions to a problem are limited by available materials and resources (constraints). The success of a designed solution is determined by considering the desired features of a solution (criteria). Different proposals for solutions can be compared on the basis of how well each one meets the specified criteria for success or how well each takes the constraints into account. (secondary to 4-PS3-4) Common Core State Standards Connections:

#### ELA/Literacy –

W.4.7 Conduct short research projects that build knowledge through investigation of different aspects of a topic. (4-PS3-2), (4-PS3-4), (4-PS3-

W.4.8 Recall relevant information from experiences or gather relevant information from print and digital sources; take notes and categorize information, and provide a list of sources. (4-PS3-2),(4-PS3-3),(4-PS3-4)

4.OAA.3 Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding. (4-PS3-4)

#### Transfer Goal:

Students will be able to independently use their learning to develop a wiring plan and carry out the plan to wire a model house.

<ul> <li>Students will understand that:</li> <li>Electricity in circuits can produce light, heat, and other forms of energy.</li> <li>Electric circuits require a complete loop through which an electrical current passes.</li> <li>An electric circuit may be constructed with different devices and in different combinations.</li> <li>Different materials can behave as conductors or insulators.</li> <li>Electricity in circuits produces a magnetic field and can be used to produce light and heat.</li> <li>Conductors are needed to complete an electric circuit.</li> <li>Different circuit components can be added and arranged in different ways to produce different results and construct a variety of electrical devices and systems.</li> <li>The technological design process consists making a original design, testing it, and making additional modifications for improvement.</li> </ul>	<ul> <li>Essential Questions:</li> <li>How does electricity work?</li> <li>Why do the lights go on when I flip a switch?</li> <li>How is my house's wiring like the circuits I can make on my desk?</li> <li>How can I make technical drawings of electrical circuits?</li> </ul>
<ul> <li>Students will know:</li> <li>Electricity flows along a path called a circuit that can consist simply a battery, a bulb, and connecting wires.</li> <li>A complete circuit can be configured in several different ways.</li> <li>Troubleshooting is a problem solving strategy that tests malfunctioning circuits</li> <li>Conductors are materials that allow electricity to flow through them in detectable amounts, and insulators are materials that do not.</li> <li>A circuit tester can be used to find hidden wiring patterns.</li> <li>Symbols are used to show how electrical components are connected in circuit diagrams.</li> <li>Elements in a circuit can be joined in series or parallel connections that affect the current, voltage, and resistance in the circuit.</li> <li>Switches control the flow of electricity.</li> <li>A semiconductor diode allows electrical current to flow in only one direction.</li> </ul>	<ul> <li>Students will be able to:</li> <li>Build various working circuits.</li> <li>Troubleshoot non-functioning circuits</li> <li>Conduct investigations of conductors and insulators.</li> <li>Use a circuit tester to investigate hidden wiring patterns.</li> <li>Use electrical symbols to make circuit diagrams.</li> <li>Assemble series and parallel circuits.</li> <li>Conduct an investigation of how diodes function, and the directionality of current flow.</li> <li>Use design processes to develop plans for wiring a house.</li> </ul>

electricity, safety, bulb, wire, battery, short-circuit, circuit, predict, prediction, model, bulb, volts, filament, threaded base, support wire, glass support, ceramic insulator, Fahnestock clip, battery holder, light bulb socket, troubleshoot, analyze, circuit tester, conductor, insulator, conduct, filament, nichrome wire, circuit box, troubleshoot, circuit diagram, symbol, switch, crossing wires, connected wires, parallel circuit, series circuit, brightness, open (off), closed (on), switch, flashlight, switch symbol, series, parallel, circuit, flashlight, open switch, closed switch, semiconductor, diode, current, circuit diagram, symbols, model, wiring plan

## Stage 2: Acceptable Evidence

#### Transfer Task Unit Post Assessment
